Part number SK0200800, affectionately named by us as the 'Sand Castle' is a multifunction antenna specifically designed to help future proof blue, and amber light vehicle fleets allowing 6 functions in single panel mounted antenna.

Boasting 4x Ultra-Wideband cellular antenna elements covering 698MHz to 6GHz, this antenna could future proof your vehicle installation for years to come. With a minimum 4dBi gain across the band, this antenna is an efficient option for all public safety applications. If the whip option is not being used the 'Sand Castle' can be mounted as a ground plane independent antenna allowing for an easier installation.

With the addition of GPS, and Tetra whip, the need for drilling multiple holes in your vehicles roof is long gone, as this only needs a single 19mm hole. Other variants are available including low loss coax cable fitting kits. Please contact us for more details.
