

SK030112 Volvo OEM Sharkfin Antenna Repositioning Kit

Our OEM Antenna Repositioning Kit is designed for the latest generation of Volvo vehicles. This kit replaces the factory-fitted sharkfin antenna with a critical communications antenna, optimising roof space for additional equipment such as antennas or solar panels. It allows the OEM sharkfin antenna to be repositioned while retaining the existing wiring and replacing the original antennas with internal window mounts.

The kit includes a Volvo antenna mount plate for installing our multifunction Mallard and Sandcastle antennas, ensuring a plug-and-play installation with no drilling required and preventing any dashboard error messages. Available as a MODIFY ONLY option, the kit requires you to send the OEM parts to us for modification. When paired with our future-proofed antennas, the kit prepares the vehicle for ESN while retaining existing Airwave systems. We also provide coax cable kits to ensure compatibility with various modems, CCTV, telemetry, and other communications devices. For additional makes and models, please contact us.
