

SK030111 MODIFY ONLY 2022> Volvo OEM Conversion Kit

The **MODIFY ONLY 2022> Volvo OEM Conversion Kit (SK030111)** is designed for **seamless integration** into Volvo models from 2022 onwards, providing an **efficient CANBUS conversion** without compromising **OEM functions**. The kit includes **LTE T-Bar antennas** that can be discreetly adhered to the interior headlining of the roof or a window, avoiding metallic surfaces to maintain **optimal signal quality**. External antennas are colour-coded for correct attachment to the **FAKRA connectors**, and the **CANBUS unit** should be positioned between the roof and headlining, ideally secured with **adhesive** to prevent any movement.

For precise **GPS functionality**, the GPS antenna should be mounted horizontally with the **SKY side facing up**, positioned under plastic trim near a window, and free from metallic objects above it to **avoid interference**. After installation, power on the vehicle to ensure that no **'SOS' error messages** appear on the dashboard. If an error is detected, verify all connections and reset the vehicle's software using the manufacturer's service software. Should the issue persist, our **technical support team** is available at +44 (0)333 360 9249 to assist.
